Dear Hiring Manager,

I am writing to express my interest in joining your engineering team. With 15+ years of experience delivering secure, scalable platforms across banking, insurance and healthcare in New Zealand and Singapore, I bring deep technical expertise and a collaborative approach to getting quality software into production.

I am currently a Senior Developer at BNZ, where I build Java and Spring Boot microservices for the bank's mobile app, including KiwiSaver and wealth APIs integrated with external vendor platforms. I am also working on migrating a statements service from MuleSoft to Spring Boot. Day to day I work with Kubernetes, OpenShift and AWS EKS, Jenkins and Spinnaker pipelines, Kafka, Redis and Kong, and I take ownership of releases, security remediation and production support.

I work AI-first, using GitHub Copilot, MCP skills and internal AI tooling in daily delivery to move faster while keeping quality high. Earlier roles at Southern Cross Health Insurance, OCBC Bank, Prudential and IBM gave me broad full stack experience, from leading an end-to-end trading application migration to leading a team of five to six engineers and building cloud-native services on Azure and AWS.

Beyond the technology, I am a team-oriented engineer who values clear communication, pair programming and mentoring. I enjoy helping teams raise their engineering standards, working with colleagues across disciplines, and taking responsibility for outcomes from design through to production.

I would welcome the opportunity to discuss how I can contribute to your team. Thank you for your time and consideration.

Kind regards,

Sugyant Chettri
